

# Big Data Discussion

# What is Big Data?

# Gaining Instant Insight from data in the format you need for better decisions

**Data diversity  
formats make it  
difficult to analyze**

**Pressure to gain  
insight quickly  
from data**

**Need to determine  
the right action  
from many  
valuable insights**

# Exponential Data Growth

The National Oceanic and Atmospheric Administration's (NOAA) data management system predicts that the agency's amount of archived data will grow to more than 160,000 terabytes (TB) by 2020, due primarily to huge amounts of data being collected by remote sensing of the atmosphere, oceans, land and space.

Exponential data growth isn't limited to large federal agencies like NOAA. For example, the data storage capacity requirements of Clackamas County, Ore., increased from 4 TB in 2005 to around 60 TB in 2010.<sup>19</sup>

# 3V's... Versus 5 V's

**What are the government problems that require insight with Big Data?**

# The Use Cases Are Endless

---

Optimize evacuation routes • Model economic growth • Real-time situational awareness • Boost cyber security • Expedite intelligence gathering • Rapid funds availability • Improve spend analysis • Enhance predictive maintenance • Increase asset availability • Better predict system failures • Sense & respond in real-time • Traffic impact • Stop Improper payments before they are paid • Model economic impacts • Predict weather impact • Understand Citizen Sentiment • Optimize use of excess energy • Pinpoint environmental risks • Understand crime trends •

# Where/How Do We Start?

# Setting an Enterprise Big Data Vision and Strategy

---

- ❑ **Invest time up-front** in identifying use cases for Big Data, segmenting the targeted users and understanding the Value
- ❑ **Bring together** mission areas, with IT stakeholders and executives...
- ❑ **Learn** by putting yourselves in the shoes of the end user or customers customer
- ❑ Focus on **outcomes NOT outputs**
- ❑ **Identify, define and develop use cases** that could create public value
  - ❑ Explore the data available within the government ecosystem for the use cases.
  - ❑ Assess your current capabilities and architecture against what is required to support your objectives

# Rethink Technology and innovate without disruption...

**Rethink Data** – volume, variety, velocity, **Veracity**, complexity, quality, real-time interaction

**Rethink flow of information** – as fresh as it can be

**Rethink Processes** – agility, within and across organizations

**Rethink Collaboration** – consumer like interface, **Mobile**, collaborate with colleagues for action

**Rethink delivery** – enable end-users the freedom and self-service they require to creatively answer the questions they are asked every day

# One Size Does Not Fit All

Understand how Big Data enables new ways to execute your mission

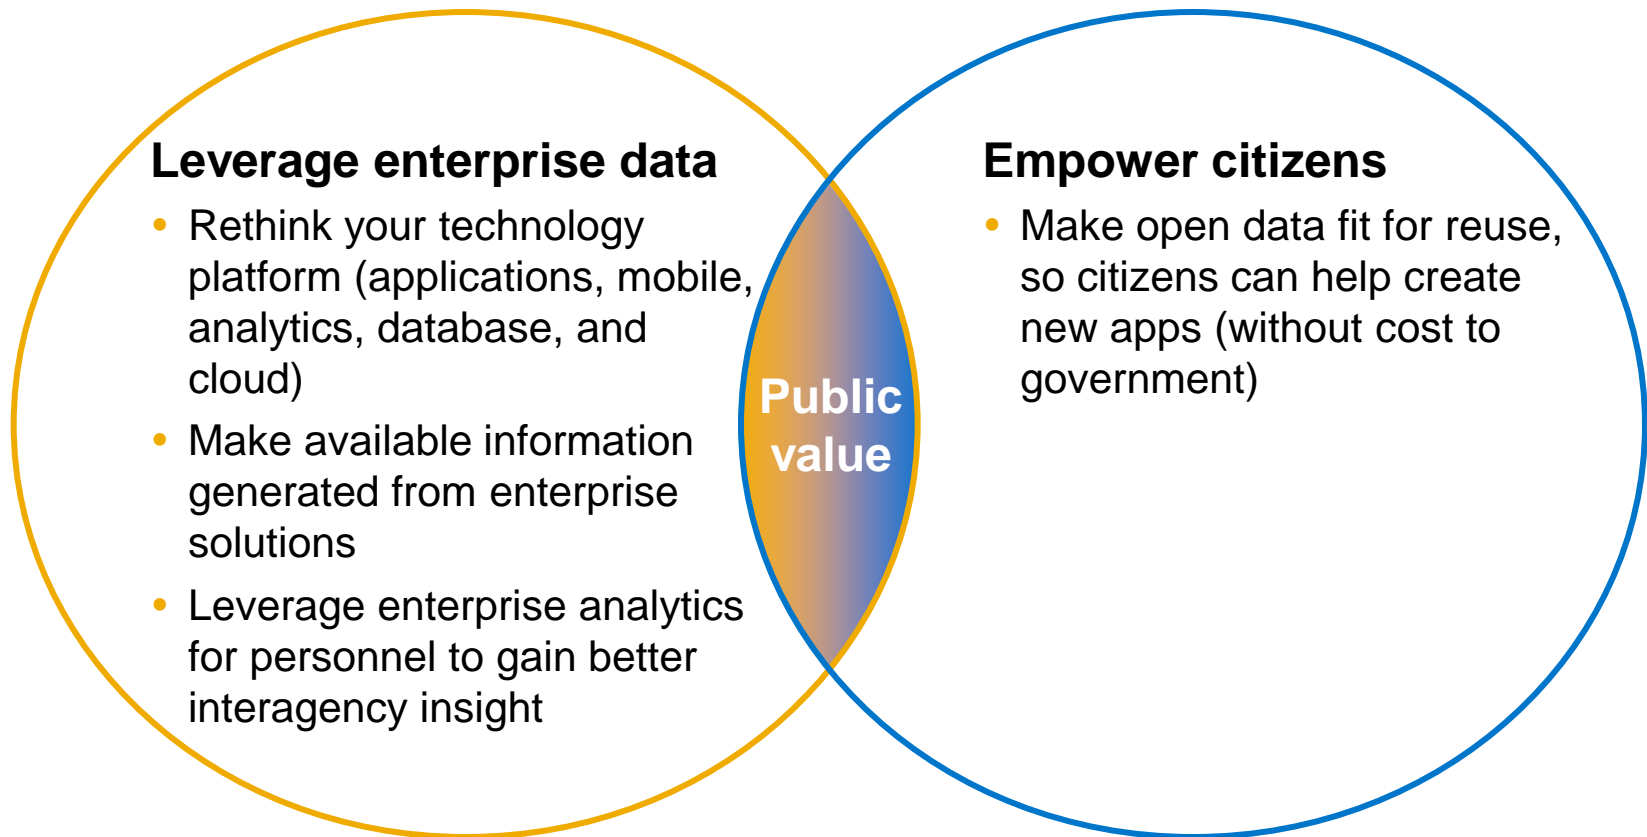

- Gain actionable, **real-time insights** in **business process context**
- Combine real time analytical processing with **batch deep behavior + pattern recognition**
- Deploy on a **Big Data Processing Framework** that is optimized across devices, technology combination and deployment options

# Build and execute a holistic strategy in the context of maximizing citizen return on investment

---

---

Rethink how government can take advantage of new citizen engagement models

# Move from reporting on the past to predicting the future

## Traditional Analysis

- ❑ Transactional data
- ❑ Extract, transform, load from op systems
- ❑ Stored in warehouse or data mart
- ❑ Request-based query (report/dashboard)
- ❑ Analysis after data is consolidated
- ❑ Make decisions and take actions based on *what has already happened*

**Transaction Engine**

**Dimensional Engine**

**Analytic Engine**

**Predictive Engine**

**Text Engine**

## Real Time Analysis

- ❑ Operational, transactional, event data
- ❑ Rapid bulk loads or event processing
- ❑ Store in-memory or process in real-time
- ❑ Ad-hoc or continuous query
- ❑ Analysis during processing
- ❑ Make decisions and take actions based on *what is happening now*

# What are some trends in Big Data?

**FASTER**

**SIMPLER**

Open Data

Analytics for non analytics people

Mobile Analytics

Sentiment Analysis

**Combined with... Cloud, Mobile**

Predictive

Real-time

# Changing citizens' lives through innovative organizations

## MKI

**Faster**

Genome analysis

**Better**

Insight to support the needs of cancer patients in real-time

**Greater**

Personalization to individual patient needs

Leverages **R, Hadoop, in-memory**

## MRI - Tokyo

**Better traffic flow** via on-demand modeling to redirect traffic via multiple applications

Incorporates **data from multiple sources** including real-time traffic, construction and road closures

**Improved livability** of city

## Recovery.Gov

Transparency and accountability

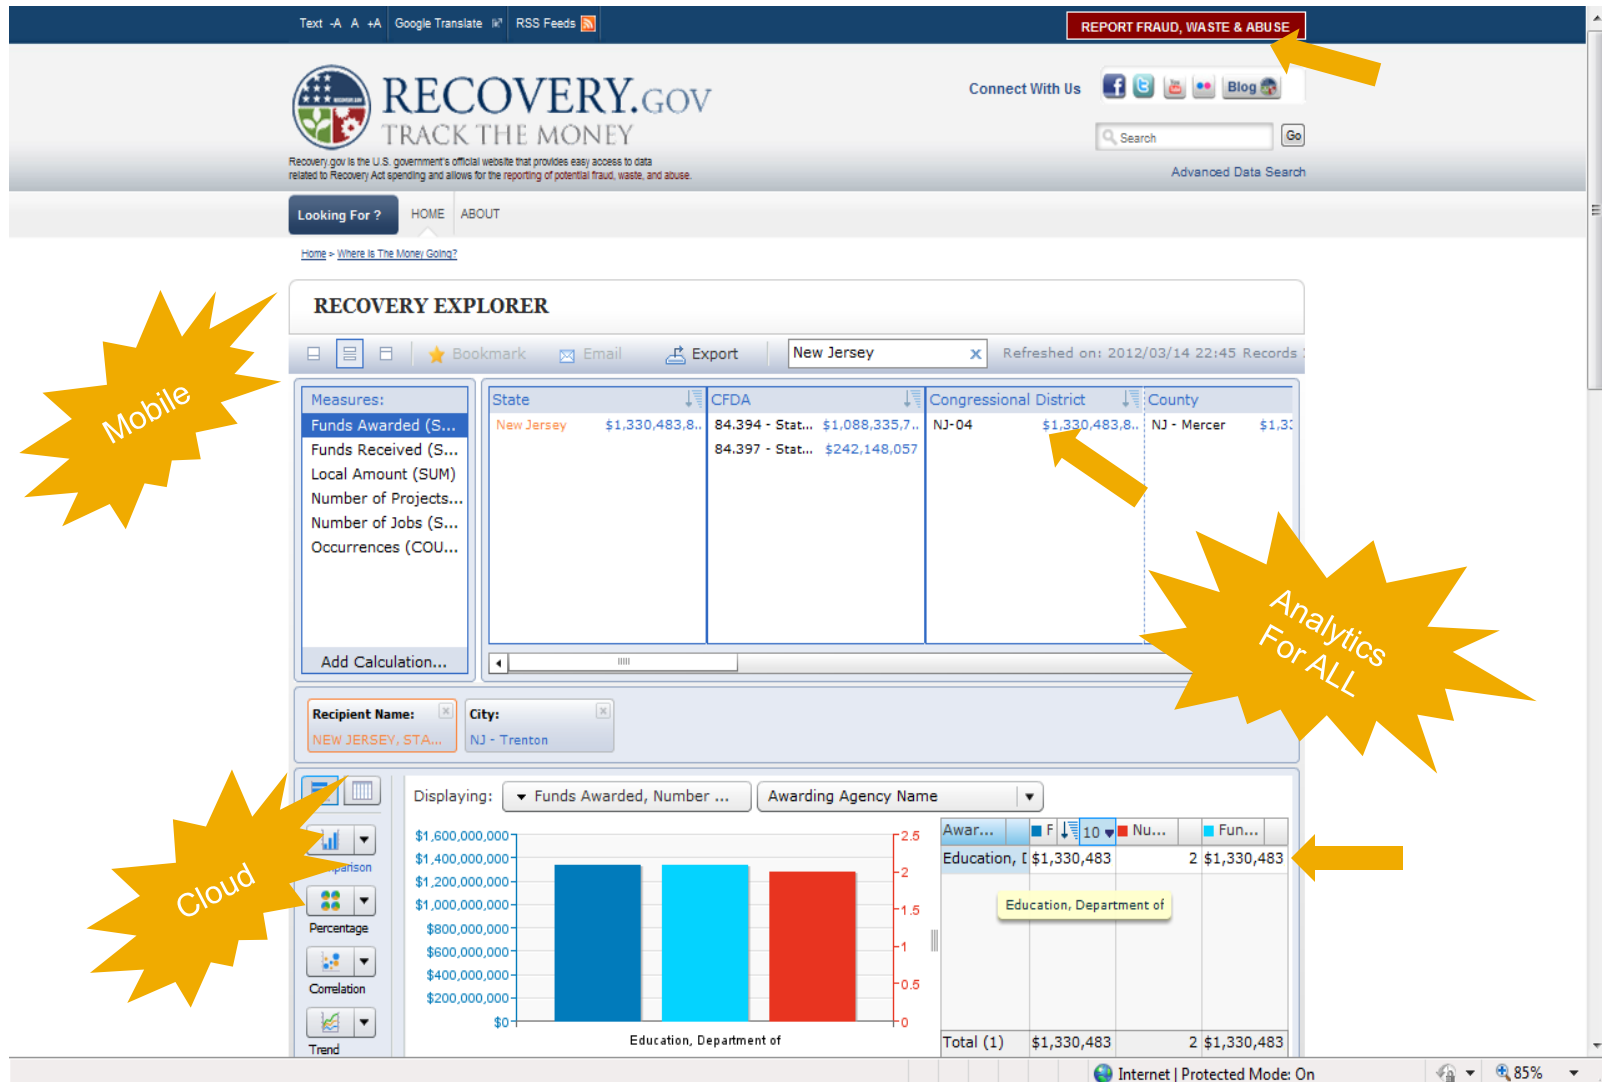

Leverages **cloud, mobile, and analytics**

Analytics **for Non-Analytics People**

# Recovery.gov

Transparency, Accountability, Prevention

# From Rear-view, Batch-processing.... To Real-time, Predictive Intelligent Data. . .

---

- ✓ **Analytics for Non-Analytics People** – ELIMINATE pre-fabrication requirements -
- ✓ **Deeper Insight** – interrogate more structured and unstructured granular data, over a larger span of time
- ✓ **Ability to transact and analyze data simultaneously** to enable real-time business
- ✓ **Enable the Real-time enterprise** – unwire the enterprise with big data visualization on mobile devices
- ✓ **Go deeper** – predictive analytics via R on SAP HANA + Apache Hadoop
- ✓ **Tap into open data sources from multiple agencies for new insights** via data services, enabling extraction, text analysis, and data quality...
