

# Interruption-free access keeps business running smoothly.

*The MBR-1000 Mobile Broadband Router from CradlePoint provides businesses with Internet access in minutes using a mobile broadband data modem, regardless of whether a DSL or cable connection is available. Get it on the Now Network.™*

Either as a dedicated connection or as a backup to current Internet service, the MBR-1000 makes accessing the Internet easy, secure and maintenance-free.

As businesses look to set-up multiple offices in various remote locations, they need to establish a secure data network with or without a DSL or cable Internet connection. Uninterrupted internet access is essential to grow business and keep day-to-day operations going in temporary, remote or home offices.

## Features

The MBR-1000 is a robust router with 3G or 4G failover capacity that provides continuous, always-available connectivity.

### **Always connected**

- > Acts like two routers in one, wired and wireless
- > Provides automatic redundant backup through an enabled wireless broadband data modem when wired ISP service is interrupted, whether planned or unplanned
- > Automatically returns to primary ISP once service is restored, without interruption to users

### **Secure and reliable**

- > Comes standard with top security features like multiple concurrent VPN pass-through sessions
- > Prevents unauthorized use of the connection with encryption modes and a firewall

### **Powerful but simple**

- > Requires no software load or IT interaction
- > Uses the latest available 802.11 "n" networking to provide better WLAN speed and greater distance than other routers with 3G or 4G (cellular) redundancy

## *Business Benefits*

**Cost-effective:** Includes many features found in expensive, enterprise-class routers at a fraction of the cost with minimal setup and maintenance.

**Immediate functionality:** With no software load or IT interaction necessary, systems can be up and running in minutes.

**Multiple device support:** Wi-Fi connectivity with up to 64 clients while on the Sprint 4G Network (must be in a Sprint 4G Market). Full Ethernet LAN connectivity with 4 LAN ports allows businesses to set up desktop machines, network drives and even networked printers.

**Added security:** Powered by WiPipe™ technology, allowing customers to get access more easily and control their network better than ever before.

## *Business Applications*

No matter the size or location of your business, the MBR-1000 running on the Sprint® Mobile Broadband Network is a great solution for:

**Remote Offices:** Provide remote employees with fast and uninterrupted internet access from wherever they may be located

**Home Offices:** Connect to secure Internet that protects both personal and business information

**Temporary Offices:** Establish your office quickly to begin running business as soon as possible

**Mobile Events:** Help employees stay connected to home office during events and tradeshows

**Small Business:** Provide your office with cost efficient Internet connectivity needed to grow the business

**Construction Sites:** Equip each work site with uninterrupted Internet access quickly and easily
